+972 54-622-4980

Hands-on leader and architect specializing in **distributed system design**, backend engines and API engineering — now focused on **blockchain security research**. Deep interest in resilient, scalable architecture, and in the unglamorous work of finding out how complex systems actually fail.

EXPERIENCE

Freelance Security Researcher & Developer

2025 — Present

Independent

Independent security research and software development across blockchain systems and fullstack products — from vulnerability hunting through to the tooling and analysis around it.

Senior Fullstack Developer

2024 — 2025

Axonius

Designed and implemented technical solutions for high-performance, graph-based data visualization and scalable SaaS data infrastructure, including the analysis of full network exploit chains.

Software Team Lead

2020 — 2024

Noosa.IO · promoted from Senior Software Developer

Directly managed 3–10 engineers on business-critical backend projects, with two standing mandates: the quality of the product experience for customers and end-users, and the detection of fraud and cyber attacks. Both required building systems that stay correct under adversarial pressure.

Fullstack Developer

2018 — 2020

MoonRock

Developed core client-facing web applications and server-side services across early-stage product iterations — the first job, and still the benchmark for how much a small team can ship.

CORE STACK

TypeScript · JavaScript ·

Solidity · Python · Node.js ·

React · Vue · REST APIs ·

System Design

EDUCATION

BSc, Physics & Chemistry

The Open University · 2020 — Present, part-time

Rigorous grounding in mathematical reasoning and analytical thinking.

LANGUAGES

Hebrew Native

English Fluent

COMMUNITY

Sherut Leumi, Dror — taught woodworking to children and built furniture for organisations that could not afford to buy it.
